“PROPORTION IS  
A CENTRAL PRINCIPLE OF  
ARCHITECTURAL THEORY”

WIKIPEDIA

# SHARD

## THE FACTS

### SLIMMER

- 60% slimmer internal ridge than alternatives
- 38% slimmer internal hip than alternatives
- Over 50% lower external bulk

### STRONGER

- Tested to wind pressure of up to 1.32 KNm-2
- Structural ringbeam supplied with Atlas lantern roof kits doesn't rely on the structural stability of the builders kerb on site
- Pressure plated system for extra security

### FITTER FRIENDLY

- No need for excess silicone at the connections to keep water out
- Ensures a fast high quality installation

### SUPERIOR THERMAL PERFORMANCE

- Thermal break in ridge and rafters prevents cold getting to the inside of the rafter.
- Industry leading ridge and rafter U Values
- U Value on ridge and rafters as low as 0.95 w/m<sup>2</sup>k
- Best U Value available for double glazing 0.9 w/m<sup>2</sup>k
- Best U Value available for triple glazing 0.6w/m<sup>2</sup>k. Note: longer lead times

### DESIGN DETAIL - THE ARCHITECTS CHOICE

- Variable pitch options available
- Roof proportionately correct with ridge and hips all 40mm
- Stock lanterns 25 degrees. Variable pitch available on standard lead time

Atlas have followed the most important rules of architectural design and made the internal widths of hip rafters, main rafters, jack rafters and ridge all the same.
